TRUSTWood™ Features and Benefits

- Improved corrosion performance when in contact with fasteners and hardware.
- A durability guarantee against decay and insect attack provided correct Hazard class is selected for proper use.
- Reduced chemical footprint.
- Health and safety for installers.
- After life. Can be disposed of safely – unlike other treated products.
- No painting, easy maintenance.
- Environmentally friendly.
- Green Guard Certified for safe use in high contact areas - contractors and downstream users.
- Colour enhanced timber dock systems.

Uses

- Residential and commercial construction.
- Viticulture - vineyards and wineries.
- DOC / Government Departments.
- Childrens playgrounds.
- Fencing and outdoor products.
- Landscaping sleepers.
- Agriculture.
- Retaining and Vege gardens.
- Marine timber docks.
- Marine walers.

TRUSTWood™ Products available

Fencing Products

- R/S Post & Rails.

Marine Products

- Structural Marine Walers.

Garden Products

- Sleepers.
- TG&V Retaining Wall.

Custom

- Roundwood to order.

Indoor & Outdoor Colour Infused Timber *that goes the distance*

TRUSTWood™ from North Sawn Lumber is an innovative, high quality, durable timber range with a limited guarantee. * **TRUSTWood™** offers environmentally aware consumers an alternative treatment option with a reduced chemical footprint, without compromising performance.

Revolutionary Technology

TRUSTWood™ "Copper" uses revolutionary technology to pressure treat and colour infuse timber for marine walers, fences, landscaping, and general marine and construction uses. The infused colour may vary between grades, density and finish of timber products. In general, rough sawn timber is a darker colour.

TrustWood™ "Copper" outdoor products use a colour additive technology which is infused into the timber during the treatment process, achieving a rich colour while maintaining the natural appearance of the timber.

**TRUSTWood™ is produced with a Copper Azole preservative which offers a limited transferable durability guarantee against decay and insect attack, assuring lifelong enjoyment of your timber - when installed to the building code.*

TRUSTWood™ Treatment is the first treated wood process to receive EPP (Environmentally Preferable Product) Status

TRUSTWood™ uses technology which is the first treated wood process to be certified under Scientific Certification Systems Environmentally Preferable Product (EPP) program based on Life-Cycle Assessment.

Largely Eliminates Copper Releases

Wood products treated with the process result in the release of 90% to 99% less copper into aquatic and terrestrial environments when compared to standard treated wood products. The very small amount released bonds readily to organic matter in the soil and becomes biologically inactive, thus effectively eliminating eco-toxic impacts.

TRUSTWood™ incorporates a pigmented colourant system.
